

Restoring Quality of Life

Zimmer Biomet Dental Implants

Full-Arch Restoration

A fixed-detachable full-arch restoration is used when all teeth are missing in the upper or lower jaw. In this procedure, multiple implants are placed.

A custom fixed-detachable full-arch restoration is seated directly onto the implants.

Using small screws, the restoration is then secured to the implant. This keeps the restoration stable and stationary, while enabling your dental practitioner to remove it should the need arise, or for cleaning.

Final restoration of the fixed-detachable full arch.

To find out if implants are a solution for you, ask your doctor to evaluate you today.
